## Run Two Wafer Sizes with No Changeover Downtime!

### Eliminate Costly Size-Change Delays, Size-dedicated Tool Sets

Tired of lost production time due to size-change downtime? Rite Track has developed a retrofit to allow TEL Mark and SVG 88 track users the ability to run two different wafer sizes with no changeover, dramatically improving system uptime. If you struggle with repeated process runs of two different wafer sizes, this retrofit is for you.

#### Features & Benefits

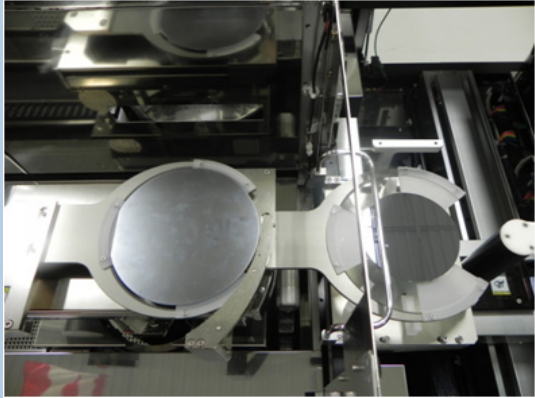

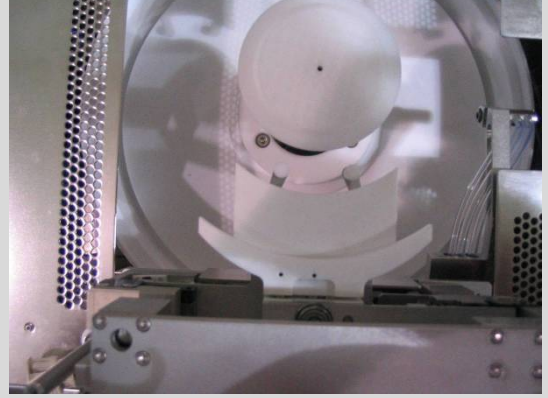

- Perfect solution for fabs running multiple wafer sizes - R&D, foundry, pilot production, other needs
- Eliminates the need for redundant, size-dedicated production tools
- Ideal for processing standard wafer sizes and Silicon-on-Glass or other unique wafer carrier needs
- Available as a field retrofit to existing systems or as part of a custom-configured refurbished system
